

INNOVATION SINCE 1877

From our home in Norway, Helly Hansen has been making professional grade gear that helps people stay and feel alive for the last 140 years.

In 1877, after many years at sea, Norwegian captain Helly Juell Hansen and his wife, Maren Margarethe, began producing oilskin jackets, trousers, sou'westers and tarpaulins, made from coarse linen soaked in linseed oil.

Since then, the legacy of Helly Hansen lives on, developing and creating a long list of first-to-market innovations.

To this day, we continue to make gear that is trusted by professionals around the world. Helly Hansen apparel is developed through the insights of the 55,000 professionals living and working in the world's harshest environments and can be seen on ski patrollers, mountain professionals, world-class sailors, skiers and adventurers.

Helly J. Hansens

HELOX - THE NEXT EVOLUTION IN WATERPROOF

Helox waterproof fabric featured a thin sheet of translucent PVC plastic that was sewn into coats took to make them waterproof. It was a revolutionary technology that became the must-have protection for outdoor use. With a

production of 30,000 coats each month, the success was almost immediate and was used by the Norwegian delegation at the 1952 Olympic Games in Helsinki.

FIBERPILE - THE TECHNICAL MIDLAYER IS INVENTED

Helly Hansen partnered with Norwegian Fiber Pile Inc. and developed the original Fiberpile – the first fleece. It featured a high warmth to weight ration and maintained its thermal qualities even when wet, making it a favorite of lumberjacks and outdoor enthusiasts. The concept lives on and the modern version of ProPile is still in production today.

1961

1970

LIFA® – THE BIRTH OF TECHNICAL BASE LAYER

HH's LIFA® revolutionized the industry with the introduction of the first technical base layers. LIFA® moves moisture away from the body allowing users to stay warm and comfortable. It has been used by professionals on every ocean, many of the world's

tallest peaks and was included in Outside Magazine's list of The Most Influential Gear of All Time in 2012. LIFA® remains the cornerstone of what we believe is the best technical base layer available today.

1984

HELLY TECH® - THE WATERPROOF AND BREATHABLE SOLUTION

Helly Tech® waterproof and breathable fabric was launched in the 1980's, winning awards and setting the new standard for performance and protection. It also provided the final layer for the 1986 introduction of the Helly Hansen 3-Layer System™, an industry-first program educating people on how to dress for the outdoors. Today, Helly Tech® fabrics are engineered to deliver the specific demands of professional's skiers, sailors, and at workplaces around the world.

1990

PROWOOL - THE PERFECT BLEND OF LIFA® AND MERINO

The Prowool (renamed HH® Lifa Merino) baselayer for cold weather conditions was launched in the late 90's, combining Lifa® Stay Warm Technology™ with Merino wool for both moisture transport and added warmth. Designed for professionals facing

the coldest conditions it quickly became the go-to piece for performance, warmth and comfort in extreme environments.

2012

H²FLOW™ - A BETTER SOLUTION FOR TEMPERATURE REGULATION

Helly Hansen introduced the new H²Flow™ Technology in 2012 with the H²Flow™ Jacket, which won an Award for Design Excellence from the Norwegian Design Council. The patented H²Flow™ Jacket features an

airflow venting system and a protective barrier. It allows adventurers to efficiently regulate their body temperature.

2018

LIFA® MAX - OUR WARMEST BASE LAYER IN COLD CONDITIONS

Helly Hansen introduces its warmest base layer to date by thickening the already tried and tested Lifa® fibers to produce a warmer, lightweight and flexible garment. The enhanced, unrivaled

warmth and comfort is why we believe Lifa® Max is the best technical base layer available today.

2ply construction

Waterproof breathable 2-layer fabric construction. Outer layer fabric is coated with Helly Tech® and DWR treatment. Inner layer is an inside backing fabric, added for comfort.

2.5ply construction

Waterproof breathable 2.5-layer fabric construction. A slightly tighter weave of fabric than 2 ply to get more durability, the 0.5 layer is treated as well to give a deeper protection against the elements.

3ply construction

Waterproof breathable 3-layer fabric construction. An even heavier and tighter weave of fabric with 3 layers to give maximum strength, durability and protections against the elements. 2 layers of fabric is treated while the inner layer is an inside backing fabric, added for comfort.

Adjustable cuffs

Adjustable cuff, either with Velcro or buttons for individual fit and comfort.

Adjustable hem

Adjustable hem at bottom, either with buttons or Velcro for individual fit and comfort.

Adjustable waist

Adjustable waist, with drawstring for individual fit and comfort.

CIS compatible

The 3-in-1 products. The component insulation system (CIS), allows the user to combine an outer layer jacket with a zip-out/zip-in insulator/midlayer. Use the outer jacket for lightweight breathability, the zip out insulator for warmth, or use them together for maximum weather protection.

Detachable hood

Detachable hood, either with snap-away buttons or zippers for less bulk if the hood is not needed.

Helmet compatible

A hood that is large enough to fit over a helmet

Kneepad pockets

Kneepads for extra protection, durability and reinforcement.

Laptop compartment

Separate, padded compartment to place your laptop or tablet in.

Life Pocket™

A pocket engineered to preserve your personal electronics' battery life span

Lightweight fabric

Lightweight construction for minimal weight and increased performance.

No shoulder seams

No shoulder seams to remove bulk and uncomfortable seams to prevent chafing or rashes.

Packable

Packable for ease of carrying and taking up less space

Packable hood

The hood can packed away in the jackets collar for storage when not needed.

Quick dry fabric

Quick dry fabric for comfort and increased performance

Reflective elements

Reflective elements on the garment for visibility and safety

Reinforcement fabric

Extra reinforcement fabric on critical areas for durability. Typical areas reinforced are elbows, seat, knees and bottom hem.

Softshell construction

Softshell construction is designed to keep you comfortably warm and dry with a light protection against water and wind resistance.

Ventilation

Ventilation through mechanical venting zippers for optimal temperature control.

Waterproof

100% waterproof material to keep the elements out.

Water resistant

Water resistant fabric and construction. Not 100% Waterproof, and does not prevent the penetration of water completely.

Water repellant

Water repellant fabric and construction. Helps in preventing the first drops of water.

WR zip

Water resistant YKK zippers to keep the elements out.

Flight compatible

Bags are the correct size for bringing as carry on and are compatible with overhead flight compartments.

4 way stretch

4-way stretch fabric in both directions, crosswise and lengthwise. For increased ease of movement and comfort.

Gusset at crotch

Reinforced at the crotch to strengthen and add a more comfortable fit without the pant splitting!

Reversible

The product can be reversed and used inside out to variate style and color. Giving you a 2-in-1 product.

Loop for ID Card

An extra loop for placing your ID card for easy storage and access when needed.

Ruler pocket

A pocket specifically designed to store your ruler

5cm leg extension

The possibility of increasing the leg length by 5cm

Rode Kruis (The Dutch Red Cross)

In 2017, Helly Hansen created bespoke uniforms for the Rode Kruis (Dutch Red Cross), outfitting them in emergency situations in the Netherlands, as well as disasters and conflict zones around the world.

Norwegian People's aid

In 2016, Helly Hansen began outfitting Norwegian People's Aid for their first aid and rescue missions. Over 2000 trained volunteers respond to more than 300 rescue calls every year, so extensive training and professional grade gear are essential for saving lives under demanding conditions.

Air Zermatt

In 2017, Helly Hansen partnered with Air Zermatt, the world-renowned rescue operation company. All 130 Air Zermatt workers rely on their Helly Hansen apparel to proved the utmost protection to complete their jobs in challenging conditions.

MAGNI SERIES

The Magni collection is our statement collection that pushes the boundaries of what is possible. From the light weight Shell Jacket to the 4-way stretch Construction Pant all the products in this collection is full of unique and technical features that separates them from the rest.

From top left to bottom right: 71361 Magni Winter Jacket, 76563 Magni Workpant, 72170 Magni Fleece Jacket, 78261 Magni Boot, 71161 Magni Shell Jacket

CHELSEA EVOLUTION COLLECTION

Sleek and simple design lines and combinations of fabrics is the common denominator throughout this collection. By combining 4-way stretch materials with a cotton polyester blend, we provide you the best of two worlds - comfort and durability.

LIFA® is an ultra-light weight base layer fabric that works perfectly in the autumn and winter. HH LIFA® delivers light insulation and moisture management through its 100% single layer LIFA® fibers. The LIFA® technology works best when layered under another garment, as the more garments you wear, the further the sweat and moisture will be transported out of the fabric and away from your skin.

LIFA® ACTIVE

VERSATILE. ALL SEASON COMFORT FEATURING SUPERCHARGED DRYING NEXT TO SKIN

LIfa® Active is our best moisture management base layer that is great for light insulation all year round. Made from a light-weight, two layer fabric that is excellent in moving moisture away from the skin; it enables the user to feel warm and comfortable. LIfa® Active can be worn as a single layer or can be layered under another garment.

- 1. LIFA® Stay Warm Technology moves sweat away from the skin.
- 2. Soft wicking fabric pulls moisture away from the body.

EN 150 20471;2013

EN ISO 11612:2015

This standard specifies performance requirements for garments made from flexible materials, which are designed to protect the wearer's body, except the hands, from heat and/or flame.

EN 61482-1-2:2014

EN 61482-1-2:2014

This standard specifies methods to test material and garments intended for use in heat- and flame-resistant clothing for workers exposed to electric arcs.

EN ISO 14116:2015

EN ISO 14116:2015

This standard specifies the performance requirements for the limited flame spread properties of materials, material assemblies and protective clothing in order to reduce the possibility of the clothing burning and thereby itself constituting a hazard.

EN 1149-5:2008

EN 1149-5:2008

EN 1149 covers the requirements of properties and test methods for measurement of protection against static electricity and the discharge process.

EN ISO 14116:2015

PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME. LIMITED FLAME SPREAD MATERIALS, MATERIAL ASSEMBLES AND CLOTHING.

This standard specifies the performance requirements for the limited flame spread properties of materials, material assemblies and protective clothing in order to reduce the possibility of the clothing burning and thereby itself constituting a hazard.

PROTECTIVE CLOTHING

HEAT AND FLAME. LIMITED FLAME SPREAD MATERIALS AND MATERIAL ASSEMBLIES

This standard specifies requirements for the limited flame spread properties of materials and material assemblies used in protective clothing.

EN 61482-1-2:2014

PROTECTIVE CLOTHING

LIVE WORKING. PROTECTIVE CLOTHING AGAINST THE THERMAL HAZARDS OF AN ELECTRIC ARC.

This part of this standard specifies methods to test material and garments intended for use in heat- and flame-resistance clothing for workers exposed to electric arc. The test is intended to simulate an accident with an

electric arc in a low voltage installation. The material test is used to determine thermal insulation and risk of skin injury, and to ensure that the garment can still be used after these tests.

THE RESERVE OF THE PERSON OF T

PROTECTIVE CLOTHING

ELECTROSTATIC PROPERTIES

EN 1149-5 specifies material and design requirements for electrostatic dissipative protective clothing, used as part of a total earthed system, to avoid incendiary discharges. The requirements may not be sufficient in oxygen enriched flammable atmospheres.

This standard specifies requirements and test methods applicable to materials and seams of protective clothing against the influence of precipitation (e.g. rain, snowflakes), fog and ground humidity at temperatures down to 5° C.

LIFA® MERINO

LIFA® MERINO is a unique 2-in1 base layer that combines lightweight Lifa® fibers next to skin and an extremely soft Merino Wool exterior. The Lifa® fabric moves moisture away from skin while the merino wool exterior is excellent at insulating and maintaining warmth. This is our warmest baselayer and is recommended for any type of outdoor activities in the winter.

- EN ISO 20471 Cl 3
- EN 13758 2
- Lifa® Active technology
- 360 degree reflective elastic transfer print on body, sleeves and shoulders

lifa warm. DRY. COMFORTABLE.

Launched in the early 1970s, LIFA® is based on a yarn technology that has been tested and developed over the years. The key functions of LIFA® deliver both moisture management and insulation, moving moisture away from the skin, while transporting perspiration to the surface of the fabric, where it evaporates. In 2006 LIFA® was combined with non mulsed Merino wool to create the best performing base layer to date.

LIFA® is a hydrophobic fiber that prohibits the absorption of liquid. The LIFA® fibers are used on the first membrane layer of base layer garments, the layer nearest to the skin. When the first yarn layer is combined with an additional layer with hydrophilic (moisture absorbing)properties, the sweat from the body is moved away from the skin and transported to the second layer, where it is absorbed. This enables the consumer to stay warm, dry and comfortable.

HOW LIFA® WORKS

LIFA® stay warm technology moves sweat away from your skin, keeping you warmer for longer

GENERAL SALES, DELIVERY AND PAYMENT TERMS

1. PARTIES

This catalogue is a sales tool issued by Helly Hansen AS, ("Helly Hansen" or "Seller"), company number 912359999, whose registered address is at Munkedamsveien 35, N-0250 Oslo, Norway. Helly Hansen's VAT number is 912 359 999. The buyer is the company stated as buyer in the Order ("the Order") Helly Hansen receives (hereinafter "the Buyer"). Helly Hansen supplies the products listed in the catalogue.

These conditions of sales together with the Order from the Buyer and the Order Confirmation from the Seller constitute the total contractual basis for the purchase (the "Agreement"). Shipment of goods may in some cases replace the Order Confirmation.

2. PRICES

All prices in the catalogue are recommended retail prices excluding VAT. We reserve the right to make price changes until the Order has been received.

Our prices are based on current raw material and production costs. We reserve the right to change our prices due to factors beyond our control until receiving the Order.

3. PAYMENT TERMS.

For delayed payments, according to the Agreement, a 1.5% per month interest rate is applied from due date.

4. PRE ORDERS

All pre-orders need to be placed before the official dead line, communicated in our sales material, by our sales representatives or customer contacts, to be valid. Pre-orders for next season are binding and cannot be cancelled by Buyer/customers.

5. ENTERING INTO THE AGREEMENT

For pre-orders, the Seller will send an Order Acknowledgement electronically. At this phase, all orders are subject to acceptance by the Seller. The Order Acknowledgement is not the acceptance of the Order. For both pre-orders and ASAP orders, Seller accepts the order through an e-mailed Order Confirmation. The Buyer shall review the Order Confirmation for any noncompliance with the Order both in terms of numbers, type of product, price and all other conditions etc. Any unaccepted discrepancy between the Order and the Order Confirmation shall be reported to the Seller no later than three (3) business days after receipt. After the above three (3) business days, the Order Confirmation is final and binding and takes precedence over the Order.

6. RETURNS

Confirmed Orders are considered binding. Helly Hansen does not accept returns for non-defective goods. The Buyer is responsible for checking the goods immediately upon receipt, and items can only be returned by an agreement with Helly Hansen's Area Sales Manager or your local Customer operations. The only occasion in which we accept returns, is if an error is caused by Helly Hansen. Upon Helly Hansen's inspection of the returned item, Helly Hansen will decide whether it is a product with defects making the return legitimate. If the return is justifiable, the Buyer will then be credited the full amount, and the freight will be paid by Helly Hansen, unless Helly Hansen

chooses the option set out in section 7 below. In case of a potential return as above, all the requirements below should be completed within eight (8) days from receiving the goods;

- contact your Helly Hansen Area Sales Manager or Customer Operations to document your purchasing date
- if your return is approved, Helly Hansen's Customer Operations will provide you with a reference number
- Items must be returned in its original packaging with original labels, and including reference number within 8 days of receipt.

Returns that are not agreed upon by Helly Hansen as returnable will not be accepted, and will be returned to the sender's expense. Returns will under no circumstances be approved for sales campaign items or items that have been taken out of production.

Agreed and approved returns that involve damaged packaging, or where additional work is required at our warehouse to put the product(s) back in its original condition, will be charged to the Buyer with 20% deduction of the credit note value.

7. CLAIMS FOR REPLACEMENT/REPAIR

Helly Hansen has, in addition to accepting a return, cf. section 6, the right to replace or repair the product. Claims must be made immediately and without undue delay, see also section 6 above. We will adhere to warranty legislation guided by each jurisdiction. Helly Hansen's financial liability for any product defect is always limited to the products' value as stated in the Order Confirmation or invoice, and does not include any damage and/or loss caused by the use or processing of the delivered goods or other indirect loss.

8. LOGO

We are able provide application of logo. Prices are upon request. Please contact your local customer operation office for more information

9. RESERVATIONS

We reserve the right for any typographical errors, errors in the article information, sold-out situation and deviation in the color reproduction of the publication for technical reasons.

Note that a product may be temporarily out of stock, in which situation you will be informed about the first possible delivery

Helly Hansen works with product development on a continuous product basis and we reserve the right to make improvements to the garment as well as changes to the product range. We reserve the right to change product specifications.

10. DISPUTE RESOLUTION AND JURISDICTION

The parties shall try to settle any disputes amicably. If an amicable settlement cannot be reached, the matter shall be subject to the jurisdiction of the ordinary Norwegian courts.

This Agreement and any dispute or claim arising out or in connection with the subject matter of this Agreement will be governed by the laws of Norway.

LIFA®

WARM. DRY. COMFORTABLE.

Launched in the early 1970s, LIFA® is based on a yarn technology that has been tested and developed over the years. The key functions of LIFA® deliver both moisture management and insulation, moving moisture away from the skin, while transporting perspiration to the surface of the fabric, where it evaporates. In 2006 LIFA® was combined with non mulsed Merino wool to create the best performing base layer to date.

LIFA® is a hydrophobic fiber that prohibits the absorption of liquid. The LIFA® fibers are used on the first membrane layer of base layer garments, the layer nearest to the skin. When the first yarn layer is combined with an additional layer with hydrophilic (moisture absorbing) properties, the sweat from the body is moved away from the skin and transported to the second layer, where it is absorbed. This enables the consumer to stay warm, dry and comfortable.

HOW LIFA® WORKS

LIFA® stay warm technology moves sweat away from your skin, keeping you warmer for longer

LIFA® - PROFESSIONAL LEVEL PERFORMANCE AND MOISTURE MANAGEMENT

100% Lifa® fabric creates a dry layer next to the skin, keeping you comfortable during highly aerobic activities in a wide range of conditions. Lifa® is a lightweight baselayer, ideal for high intensity activities in mild to cold temperatures. No other baselayer transports sweat away from the skin better than Lifa® .

- 1. LIFA® Stay Warm Technology moves sweat away from the skin.
- 2. Mesh construction enables moisture transportation.

LIFA® ACTIVE - VERSATILE, ALL SEASON COMFORT FEATURING SUPERCHARGED DRYING NEXT TO SKIN

Lifa® Active is an advanced construction combining Lifa® Stay Warm Technology and fast wicking fibers, making it ideal as an all year activity base layer. Staying dry is important in order to stay comfortable. In addition, this product is constructed with a relaxed fit, making it just as great to wear as a casual piece

- 1. LIFA® Stay Warm Technology moves sweat away from the skin.
- 2. Soft wicking fabric pulls moisture away from the body.

LIFA® MERINO - PROFESSIONAL LEVEL WARMTH AND MOISTURE MANAGEMENT

Lifa® Merino is a 2-layer construction combining Lifa® Stay Warm Technology and 100% pure merino wool, making it the ideal baselayer for a ll activities in cold weather. Staying dry is important to stay warm and comfortable.

- 1. LIFA® Stay Warm Technology moves sweat away from the skin.
- 2. 100% merino wool insulates, pulls moisture away from the body and wicks the moisture.

LIFA® is an ultra-light weight base layer fabric that works perfectly in the autumn and winter. HH LIFA® delivers light insulation and moisture management through its 100% single layer LIFA® fibers. The LIFA® technology works best when layered under another garment, as the more garments you wear, the further the sweat and moisture will be transported out of the fabric and away from your skin.

H^2FLOW^{TM}

WARMER, COOLER, DRIER,

H'Flow™ allows you to control your body's temperature. The technology optimizes insulation, using air pockets or holes that store warmth from the body and, at the same time, allows you to control heat and airflow through ventilation zippers, enabling the cold air to enter and the warm air to exit.

Negative or positive air space is created by adding or subtracting fabric on the inside of the garment to allow this extra air space to be filled with air heated up by the body. In both cases, the purpose to create pockets of air in strategic areas of the body, trapped in these channels or spaces. The air contained in these pockets heats up from the body heat of the wearer, and keeps you warm.

HOW H²FLOW™ WORKS

Ventilation zippers let cold air in if you get too warm. Air pockets or holes store warmth from your body, so all H²Flow™ jackets have a high warmth to weight ratio.

HELLY TECH®

WATERPROOF, BREATHABLE, GUARANTEED.

HELLY TECH® IS THE WATERPROOF AND BREATHABLE OUTER LAYER BETWEEN YOU AND THE ELEMENTS. ITS UNIQUE MEMBRANE STOPS WATER MOLECULES GOING IN, BUT LETS MOISTURE MOLECULES ESCAPE. KEEPING YOU DRY FROM THE OUTSIDE AND COMFORTABLE ON THE INSIDE.

Helly Tech® is constructed with Polymer Polyurethane (PU) based membranes and coating technologies. The PU membrane gives softness and stretch to the fabric, while the coating allows waterproofness and breathable qualities. Helly Tech® is made either with Hydrophilic barrier membranes or Micro-porous membranes, depending on the end-use purpose of the fabric.

The Hydrophilic barrier works on an osmotic principle, keeping salts from entering and blocking the pores. The Micro-porous PU membranes are hydrophobic- "water hating" polymers. This membrane construction is responsible for the waterproofness of Helly Tech®, making the pores up to 20.000 times smaller than water droplets, while allowing breathability since the pores are up to 700 times larger than a water vapor molecule, allowing the evaporation of sweat and heat.

Helly Tech® is actually more than just a fabric – it is a combination of a DWR-treated outer fabric, a highly breathable and waterproof membrane, fully sealed seams and often a highly breathable inner fabric, mesh or lining.

The seams of the products are taped over with a waterproof ribbon and glue, preventing any water from entering the small gaps between the stitches of the seams.

HOW HELLY TECH® WORKS

- 1. DWR treated outer fabric is windproof and water-repellent
- 2. Waterproof and breathable membrane or coating
- 3. Highly breathable inner fabric, mesh or lining

THERE ARE NUMEROUS TYPES OF HELLY TECH® FABRICS. THE MAIN DIFFERENTIATOR IS THE NUMBER OF PLIES (OR LAYERS) THE FABRIC IS BUILT FROM.

Extremely waterproof and breathable designs and constructions. For highly aerobic, extremely wet or unusually long-lasting activities in extremely harsh conditions.

Highly waterproof and extra breathable sport specific designs and constructions. For a wide range of high performance outdoor activities during highly challenging, changing and unpredictable weather conditions.

Fully waterproof, windproof and breathable fabrics and constructions. For all situations and weather conditions where protection from the elements is needed.

3 PLY CONSTRUCTION

Outer fabric + membrane and inner fabricbonded together for lightweight, quick drying and durability.

2,5 PLY CONSTRUCTION

Outer fabric + membrane or coating bonded together with protective print on the inside for extreme lightweight and packability.

2 PLY CONSTRUCTION

Outer fabric + membrane or coating bonded together for breathable waterproofness, protected by inside lining or mesh adding warmth and comfort.

LAB TESTS

WATER COLUMN, ISO 811 and JIS LIS L 1092-B1

Gives the value pressure mm of water held back by fabric. 10.000mm is the $\,$ same pressure you would experience diving to 10m or equal to the pressure from a fire hose.

Gives the value of $g/m^2/24h$ - the amount of water molecules that can pass through 1 square meter of fabric within 24 hours.

15.000 grams breathability equals that a jacket is able to pass 30 lites of water in 24 hours. In comparison, our human body perspirates 1 liter per 24 hours.

WATER REPELLENCE, ISO 4920: 1981 and AATCC 35-2006 Spray test: testing of the durable water repellence before and after washing, by drizzling the fabric and measure how many drops that bounce up and if any attaches or wets out the fabric surface.

LIFE POCKET™

 $A pocket \ engineered \ to \ preserve \ your \ personal \ electronics' \ battery \ life \ span. \ Scientifically \ tested \ and$ proven by engineers to extend the battery life of your mobile phone or action camera in cold environments. Through thermal resistant materials and an innovative contruction, the Life Pocket™ stays 2 times warmer than a regular pocket.

HELLY HANSEN TECH PARTNERS

3M

Science. Applied to Life.™

3M is a pioneer in developing the science behind retroreflection and has been advancing the technology in new and groundbreaking ways for over 70 years. With more than 35 different products, including many high performance options, 3M™ Scotchlite™ Reflective Material offers one of the largest and most diverse portfolios in the industry. It is a trusted name in reflective material technology.

POLARTEC®

The Cornerstone of fleece insulation

We work extensively with Polartec®, a famous manufacturer of lightweight and warm fleece, which is known for performance, durability and aesthetics. Main benefits for using Polartec® are warmth without high additional weight, high breathability, packable and fast drying.

CORDURA®

Durable, Versatile, Reliable

If It's Made With CORDURA® Fabric, It's Made To Last. CORDURA® fabrics are the perfect combination of durability, versatility and reliability. For more than 40 years, people who love the outdoors have relied on CORDURA® fabrics to be as rugged as they are.

PRIMALOFT®

The world's best down alternative

PrimaLoft® is a synthetic insulation technology, offering superior thermal properties with excellent water repellency. It is made up of ultra-fine fibers that form air pockets to trap heat inside. Additional feature of the ultra-fine fiber is super softness.

YKK®

Little parts. Big difference

Little parts, Big difference. High quality zippers for all purposes. YKK® is a Japanese company founded in 1934. Today, their products are sold globally and YKK® is reputed as the industry leader for quality and innovative zippers and closures.

ALLIED®

Advanced down technologies

Natural goose down is considered to be the single best insulating material available, due to its lightweight, compressibility and heat retention. Allied Down supplies its customers with the finest quality down and feathers on the market.

VIBRAM®

Walk Safe. Work safe.

Walk Safe, Work Safe, with Vibram® soles. Tested where it matters

CE MARKING

Helly Hansen Workwear's (PPE) products are manufactured and tested in accordance with the standards which support European Directive (89/686/EEC) and are therefore approved in accordance with CE marking regulations.

Helly Hansen workwear is intended to prevent accidents and injuries during work on exposure to cold, heat, fire, rain and in limited visibility.

The CE marking refers to a safety level on the product. European Directive (89/686/EEC) is the applicable law for the European member states on the issue of personal protective equipment (PPE). European Directive (89/686/EEG) states as a basic requirement for design and manufacturing that PPE is used to make working conditions safer.

PPE REGULATION (EU) 2016/425.

From the 21st of April 2018, the Directive 89/689/EEC will be replaced by PPE Regulation (EU) 2016/425.

Transitional period will be till the 21st of April 2019. In the transitional period, products can be certified according to old as well as to the new regulation.

Certificates according to Directive 89/686/EEC are valid till their expiry date.

STANDARDS

IS0 13688:2012

GENERAL PERFORMANCE REQUIREMENTS

ISO 13688:2012 specifies general performance requirements for ergonomics, innocuousness, size designation, ageing, compatibility and marking of protective clothing and the information to be supplied by the manufacturer with the protective clothing.

ISO 13688:2012 is only intended to be used in combination with other standards containing requirements for specific protective performance and not on a stand-alone basis.

PROTECTIVE CLOTHING

CLOTHING TO PROTECT AGAINST HEAT AND FLAME

This standard specifies performance requirements for garments made from flame retardant materials, which are designed to protect the wearer's body, except the hands and feet, from heat and/or flame.

All antiflame products approved to ISO 11612, should be marked with CE and antiflame-pictogram.

The letters below the pictogram shows which exposures the garment the garment protects against.

- A = Limited flame spread A1 A2 (A1 surface ignition, A2 edge ignition)
- B = Convective heat Level 1 3 (best level 3)
- C = Radiant heat Level 1 4 (best level 4)
- D = Molten aluminium splash Level 1 3 (best level 3)
- E = Molten iron splash Level 1 3 (best level 3)
- F = Contact heat Level 1 3 (best level 3)

Limited flame spread properties (A) are always recorded. At least one other property, B to F shall be included, where each letter is followed by a number, indicating the level of performance achieved. Number 1 indicates the lowest level of performance which is acceptable.

HIGH VISIBILITY CLOTHING

This standard specifies requirements for protective clothing capable of signaling the user's presence visually, intended to provide conspicuity of the user in high risk situations under any light conditions by day and under illumination by vehicle headlights in the dark. High Visibility products maintain demands in EN ISO 20471 which is the European norm for visibility clothing. Garments approved according EN ISO 20471 shall have waistcoat pictogram.

The number beside the pictogram (here X) indicates the garment class.

Clothing classes are scaled after minimum-demand for area of fluorescent and reflective material at each separate garment.

EN ISO 14116-2015

PROTECTIVE CLOTHING

PROTECTION AGAINST HEAT AND FLAME. LIMITED FLAME SPREAD MATERIALS, MATERIAL ASSEMBLES AND CLOTHING.

This standard specifies the performance requirements for the limited flame spread properties of materials, material assemblies and protective clothing in order to reduce the possibility of the clothing burning and thereby itself constituting a hazard.

The garment protects the user against heat and flame spread, according European standard EN ISO 14116.

The material(s) complies with ISO 14116 indexes 0/0/0 - limited flame spread index / number of washes with letter H, I or C / washing temperature H domestic wash, I - industrially wash, C - dry-clean

The limited flame spread index 1: does not spread flame but may form a hole on contact with flame.

Index 2: does not spread flame, does not form a hole on contact with a flame. Index 3: does not spread flame and does not form a hole on contact with flame, and give only limited afterflame.

Garment approved according index 1 shall not be used next to the skin, and shall only be used together with garments approved according to index 2 or 3.

61482-1-2:2014

PROTECTIVE CLOTHING

LIVE WORKING. PROTECTIVE CLOTHING AGAINST THE THERMAL HAZARDS OF AN ELECTRIC ARC.

This standard specifies methods to test material and garments intended for use in heat- and flame-resistant clothing for workers exposed to

Clothing fulfilling this standard, ensures that the consequences of workers, after exposure to electric arcs, will not be aggravated by the clothing itself. The test methods are divided into two parts: Method 1 = Testing of material. Method 2 = testing of clothing.

The material and clothing are divided into two classes: Class 1 = 4 kA. Class 2 = 7 kA

All Material used in the clothing shall at least pass the Class 1 test. Multi-layer and combinations garments have to be tested: They must also meet the following criteria:

- Burning time 5s
- No melting true the inner side
- No hole bigger than $\max 5 mm$ in every direction (in the innermost layer).

Wear the garment properly closed. The protection effect can only be reached by a combination of jacket and trousers. Use additional equipment (gloves, helmet, visor, etc.) for complete protection.

STANDARDS

PROTECTIVE CLOTHING

PROTECTION AGAINST RAIN

This standard specifies requirements and test methods applicable to materials and seams of protective clothing against the influence of precipitation (e.g. rain, snowflakes), fog and ground humidity at temperatures down to 5° C. The garment is tested regards to waterproofness (X) and water vapour resistance (Y)

- X Resistance to water penetration, level 1, 2 or 3 (where 3 protects best
- Y Water vapour resistance, level 1, 2 or 3 (level 3 most permeable)

PROTECTIVE CLOTHING

ENSEMBLES AND GARMENTS FOR PROTECTION AGAINST COLD.

The standard specifies test methods and requirements of functional properties in garments which are intended to protect against cold (air temperature below -5 °C). Helly Hansen has tested its products according to method B, which means that the insulation (X) has been measured for a garment combination (jacket/pant or coveralls) with a base layer. In addition, air permeability (Y) is measured.

X (B) - thermal insulation

Y - air permeability class (classes 1-3, where class 3 protects best against wind)

PROTECTIVE CLOTHING

GARMENTS FOR PROTECTION AGAINST COOL ENVIRONMENTS.

This standard specifies requirements and test methods for performance of single garments for protection against cooling of the body in cool environment (air temperature of -5 °C and above). All garments approved according to EN 14058 shall be marked with pictogram indicating that protection against cool environment is offered with the appropriate performance level:

Y - Thermal resistance class (classes 1-3)

PROTECTIVE CLOTHING

ELECTROSTATIC PROPERTIES

sufficient in oxygen enriched flammable

EN 1149 covers the requirements of properties and test methods for measurement of protection against static electricity and the discharge process. EN 1149-1 specifies requirements and test methods for materials intended to be used in the manufacturing of electrostatic dissipative protective clothing (or gloves) to avoid incendiary discharge.

EN 1149-2 specifies a test method for measuring the electrical vertical resistance of protective clothing materials- This European standard is not applicable for specifying protection against mains voltages. EN 1149-3 specifies methods for measuring the dissipation of electrostatic charge from the surface of materials for garments. This test method is applicable to all materials, including homogeneous materials and inhomogeneous materials with surface conducting fibres and core conducting fibres. EN 1149-5 specifies material and design requirements for electrostatic dissipative protective clothing, used as part of a total earthed system, to avoid incendiary discharges. The requirements may not be

atmospheres. This European standard is not applicable for protection against mains voltages. The material must meet the requirements set out in EN 1149-1 or -3.

PROTECTS AGAINST ULTRAVIOLET RAYS.

STANDARDS

ISO 12402-3 LEVEL 150N **HELLY HANSEN LIFEJACKETS**

These lifejackets provide face-up flotation with levels of support sufficient for various open and rough waters uses. Life jackets have a buoyancy distribution sufficient to turn most users, when tested on users wearing swimming costumes according to ISO 12402, to a position where the mouth has a $\,$ defined freeboard above water's surface even when the user is unconscious.

ISO 12402 give guidance on the design and application of personal flotation devices (PFD) for persons engaged in activities, whether in relation to their work or their leisure, in or near water. PFDs manufactured selected and maintained to this standard should give a reasonable assurance of safety from drowning to a person who is immersed in water.

Helly Hansen Work Wear sells PFDs that do not require intervention (automatically operating PFDs). They are suited to activities where persons are likely to enter the water unexpectedly, whereas PFDs requiring intervention e.g. manually inflated PFDs are only suitable for use if the user believes there will be sufficient time to produce full buoyancy, or help is close at hand. In every circumstance, the user should ensure that the operation of the PFD is suited to the specific application. The conformity of a PFD to the part of ISO 12402 does not imply that it's suited for all circumstances.

Under certain conditions such as rough water and waves, the use of watertight and multilayer clothing, which provide intentionally or otherwise additional buoyancy, or the use of equipment with additional weight such as tool belts will likely alter the performance of the PFD. Users, owners and employers need to ensure that this is taken into account when selecting a PFD. Similarly, PFDs may not perform as well in extremes of temperatures, although fully approved.

PFDs may also be affected by other conditions of use, such as chemical exposure and welding, and may require additional protection. The user has to be assured that the PFD will not be adversely affected.

The relative amount of required inspection and maintenance is a factor of paramount importance in the choice and application of specific PFDs. Its potential length of service often depends on the conditions of use and storage, which are the responsibility of the owner, user and /or employer.

ISO 12402-3. Level 150 N

Life jackets performance level 150 is intended for general offshore and rough weather use where a high standard of performance is required.

- It is essential that the owner, user and employers choose PFDs that meet the correct standard for the circumstances in which they will be used.
- PFD needs to be secured when worn in order to provide positive support in the water and to allow the user to swim or actively assist himself or others
- No PFD guarantees rescue but is seen as means to reduce the risk of drowning.
