and safety footwear.**

Jan Antonín Baťa (1898 – 1965)

*Jan A. Baťa*

## BATA PHENOMENON

The roots of shoemaking in Slovakia go back to the most inspiring person in our shoemaking history. In 1938, Jan Antonín Baťa, the owner of a shoe factory, was at the birth of the legendary shoe town, which bears his name - Baťovany, where he raised generations of shoemakers.

In the post-war period, footwear production developed rapidly in the newly formed town Partizánske. At the height of its glory in 1989, the factory, at that time called ZDA Partizánske, employed 16,000 workers and produced incredible 32,000,000 pairs of shoes. ARTRA, as the largest manufacturer of footwear in Partizánske, has held Jan Antonín Baťa's legacy in deep respect for 32 years and continues his tradition. Today, ARTRA supplies safety shoes to 32 European countries.

A photograph of a car body in a factory setting. A worker in a white protective suit and gloves is working on the interior of the car, specifically the area around the front wheel and door. The car is silver and has a sleek, aerodynamic design. The background shows industrial equipment and other car parts.

The background image is a futuristic medical or laboratory environment. On the left, a robotic head with a translucent, cracked white face and glowing blue eyes is shown in profile. The right side of the image shows a patient bed with a white pillow and a small potted plant on a bedside table. The overall color palette is dominated by blue and pink/magenta hues.

# GUIDE TO STANDARDS

## FOOTWEAR CLASSIFICATION AS PER PROTECTION LEVEL

		SAFETY CLASSES			
	EN ISO 20347 – work footwear	OB	O1	O2	O3
	EN ISO 20345 – safety footwear	toe protection against impact up to 200 J and pressure 15 kN		SB	S1 S2 S3
SYMBOL	RISKS COVERED				
	basic requirements	x	x	x	x
SRA*	slip resistance on ceramic floor tiles with NaLS**	x	x	x	x
SRB*	slip resistance on steel floor with glycerine				
SRC*	slip resistance SRA + SRB				
	closed heel part	o	x	x	x
A	antistatic properties	o	x	x	x
E	energy absorption in heel area	o	x	x	x
FO	resistance of sole to fuels (safety footwear)	o	x	x	x
WRU	resistance of footwear upper to penetration and absorption of water	o		x	x
P	resistance of the bottom of the footwear to puncture up to 1100 N	o	o		x
	tread pattern outsole	o	o	o	x

x	compulsory, basic requirement, it must be met for the given class
o	optional, additional requirement, as per the customer’s requirement
*	one of three requirements for slip resistance must be met
**	NaLS – solution of sodium lauryl sulphate

## CONVERSION TABLE OF FOOTWEAR SIZES
